

To whom it may concern, I write to object the notion that "retail investors can only invest in Eligible large-cap virtual assets". I understand that the Regulatory Requirements is set up to protect investors' interest. The virtual assets, crypto field is still new to the traditionally established financial field, even the index providers. 'virtual assets which are included in at least two "acceptable indices" issued by at least two independent index providers' Yet this notion above significantly bars investors' access to the majority of virtual assets. I propose that the sfc consider lifting this notion. Instead, the trading platforms can assess the retail investors' knowledge on virtual asset trading, like the protocol for trading options and futures. Although the above mentioned are different products, the risk to investors, that they can lose the entirety of their investment, is the same. The same rule can be applied to virtual asset trading. Best regards.
